

JSON from Langflow is exported and imported to Postman

The image displays two screenshots of the Postman application, demonstrating the process of exporting JSON data from Langflow and importing it into a Postman collection.

Top Screenshot: Exporting JSON from Langflow

The top screenshot shows a POST request in Postman to the endpoint `http://localhost:7860/api/v1/run/59e8eafb-5d15-473e-9aea-12f20de82cee?stream=false`. The request body is a JSON object:

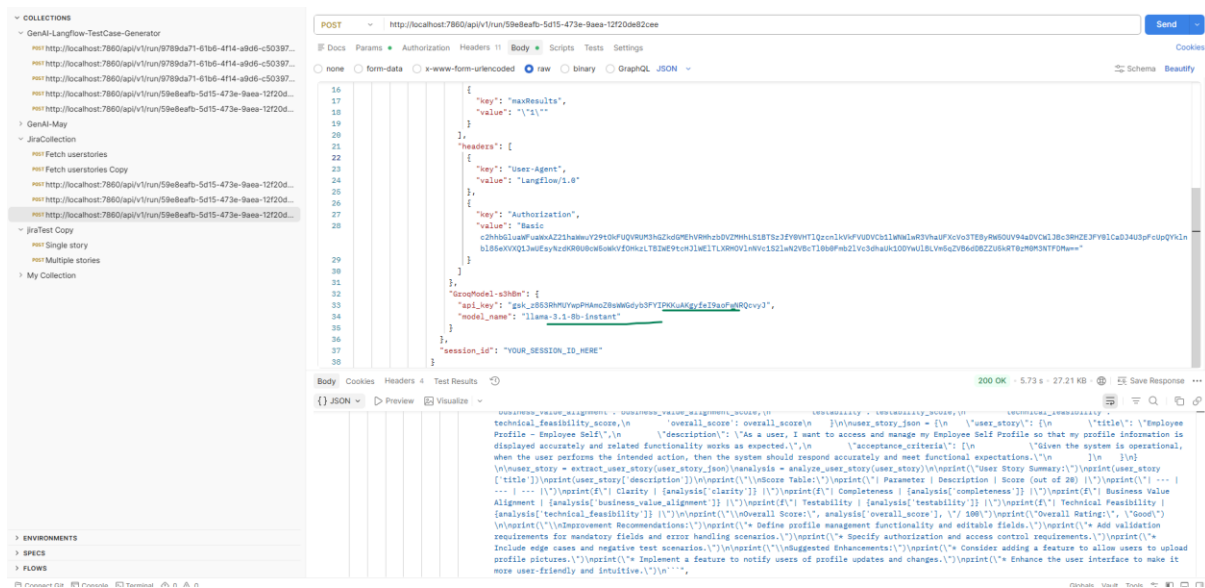

```
{
  "output_type": "text",
  "input_type": "text",
  "input_value": "hello world!",
  "tweaks": {
    "APIRequest-KASpe": {
      "body": [
        {
          "key": "jail",
          "value": "\"key = US-25\""
        },
        {
          "key": "fields",
          "value": "\"[\\\"key\\\", \\\"summary\\\", \\\"description\\\", \\\"status\\\", \\\"reporter\\\"]\""
        },
        {
          "key": "maxResults",
          "value": "\"1\""
        }
      ]
    },
    "headers": [
      {
        "key": "User-Agent",
        "value": "Langflow/1.0"
      }
    ]
  }
}
```

The response status is **200 OK** with a response time of 5.73 s and a size of 27.21 KB. The response body is a large JSON object containing a detailed analysis of the input text.

Bottom Screenshot: Importing JSON to Postman

The bottom screenshot shows the same POST request in Postman, but with the JSON data imported from a collection. The collection is named **JiraCollection** and contains several items, including the one being edited. The JSON data is the same as in the top screenshot.

The bottom screenshot also shows the **ENVIRONMENTS** and **FLows** sections on the left sidebar, indicating the overall structure of the Postman workspace.

User Story Review Report

User Story Summary

Employee Profile – Employee Self

User Story

As a user, I want to access and manage my Employee Self Profile so that my profile information is displayed accurately and related functionality works as expected.

Quality Assessment Dashboard

Evaluation Area	Assessment	Score
 Clarity	Story is understandable and well-structured but lacks details about profile management capabilities.	18 / 20
 Completeness	Acceptance criteria are minimal and do not cover validations, permissions, or exception scenarios.	12 / 20
 Business Value	Supports employee self-service and reduces dependency on HR operations.	18 / 20
 Testability	Basic functional tests can be created; however, negative and boundary scenarios are missing.	15 / 20
 Technical Feasibility	Straightforward implementation within a standard Employee Self-Service (ESS) platform.	19 / 20

Overall Assessment

Overall Score

82 / 100

Rating

 **GOOD**

The user story provides clear business intent and value. However, additional acceptance criteria and validation scenarios are required to improve completeness and test coverage.

Gap Analysis

Missing Details

- Editable profile fields are not defined.
- Validation requirements are missing.
- Access control and authorization rules are not specified.
- Error handling expectations are not documented.
- Boundary and edge case scenarios are absent.
- **Recommendation:** Proceed after refining acceptance criteria and adding detailed validation, authorization, and exception-handling requirements.
